Victoria, BC, Canada — reachme@chaitanyaa.com — +1-250-891-5255 — LinkedIn — Portfolio — GitHub

Summary

Software QA-focused Computer Science graduate (Dec 2025) with experience testing REST APIs, multi-tier web applications, and performance under load. Proven background in structured QA/QC processes, test design, and defect tracking across both software and large-scale operational environments. Strong understanding of web technologies, databases, and quality-driven development practices.

Education

University of Victoria

Bachelor of Science Computer Science with Software Systems Specialization and Business Minor
Graduating GPA: 3.8/4

Victoria, BC, Canada

Dec 2025

- **Relevant Coursework:** Software Engineering, Web Development, Databases, Algorithms and Data Structures, Operating Systems, Software Testing and QA

Professional Experience

Infinity Outdoor Pvt. Ltd

Contract Web Developer

Delivered 2025

- Tested and validated responsive web features across Chrome, Firefox, and mobile browsers to ensure cross-platform compatibility.
- Verified UI functionality against business requirements and identified defects prior to release.
- Improved application performance by **35%** through optimization and testing of component behavior and asset delivery.
- Collaborated with stakeholders to clarify requirements and validate expected functionality.

Houle Electric

Co-op Project Manager / Assistant

Jan 2024 – Aug 2024

Cowichan District Hospital Redevelopment

- Developed and implemented structured **QA/QC workflows** to ensure quality, compliance, and process reliability.
- Reviewed requirements and created standardized **inspection and validation templates** used across multiple teams.
- Tracked, documented, and resolved issues through structured reporting and cross-team coordination.
- Managed high-volume technical documentation with strong attention to detail and traceability.
- Supported acceptance validation and ensured deliverables met business and regulatory standards.

Technical Projects

SwiftTrade – Full-Stack Trading Platform

Python, REST APIs, Docker, MongoDB, Redis, RabbitMQ, JMeter

- Designed and tested **REST APIs** for authentication, transactions, and order management.
- Created test scenarios to validate **edge cases, failure handling, and data integrity**.
- Performed load and **performance testing using JMeter** to evaluate system stability under high traffic.
- Verified FIFO order-matching logic through functional and scenario-based testing.
- Used **Docker environments** to ensure consistent testing and reproducibility.

Social Spark — AI Brand & Influencer Platform

React, Node.js, MongoDB, Gemini API, Docker

- Developed a **full-stack platform** to match brands with influencers using data-driven campaign insights.
- Integrated **Gemini API** to automate content analysis and generate campaign recommendations.
- Designed **secure authentication** and **backend services** to support scalable user interactions and data processing.
- Designed **scalable backend services** with clear API boundaries to support future feature expansion.

RhythmBeats

Arduino, Teachable Machine, Sensors

- Developed a physical music composition system using **Arduino** and **sensor-based** inputs to detect and classify musical blocks.
- Integrated a **Teachable Machine model** to map physical inputs to musical notes and instrument sounds.
- Designed the system to provide reliable **real-time feedback** and an engaging tangible interaction experience.

SceneCraft

Arduino, AI, Physical Interaction

- Built an **interactive storytelling tool** that combines physical object manipulation to generate AI-based narrative prompts.
- Designed **intuitive tangible interactions** to support creativity and engagement for young users.
- Integrated **Gemini API** logic to dynamically generate story elements based on user input sequences.

Technical Skills

Testing & QA: REST API Testing (Postman/JMeter), Test Case Design & Execution, Functional Integration & Performance Testing, Defect Tracking & Documentation, Cross-Browser Testing

Web Technologies: HTML5, CSS3, JavaScript, JSON, React, Node.js, Express

Databases: MongoDB, PostgreSQL

Tools: Docker, Git, Linux, CI/CD Basics

Concepts: API Design, Microservices, Performance Optimization
