Education

University of Victoria

Victoria, BC, Canada

Bachelor of Science Computer Science with Software Systems Specialization and Business Minor

Dec 2025

Graduating GPA: 3.8/4

- **Relevant Coursework:** Software Engineering, Web Development, Databases, Algorithms and Data Structures, Operating Systems, Software Testing and QA

Professional Experience

Infinity Outdoor Pvt. Ltd

Delivered 2025

Contract Web Developer

- Designed and launched a responsive marketing website using **React, Vite, and Tailwind CSS** to showcase outdoor media campaigns.
- Improved page load performance by **35%** through optimized component architecture and asset management.
- Collaborated directly with stakeholders to translate business requirements into scalable UI components and features.
- Implemented modern frontend structure to support future expansion and maintainability.

Houle Electric

Jan 2024 – Aug 2024

Co-op Project Manager / Assistant

Cowichan District Hospital Redevelopment

- Developed and implemented structured **QA/QC workflows** to ensure project quality, compliance, and reliability.
- Designed reusable digital templates in Procore to standardize processes across multiple teams and projects.
- Managed high-volume technical documentation, inspections, and reporting with strong attention to detail and accountability.
- Coordinated with cross-functional teams to resolve issues and maintain project timelines.

Technical Projects

SwiftTrade - Day Trading System

Python, REST APIs, Docker, JMeter, MongoDB, RabbitMQ, Redis

- Built a full-stack trading platform supporting **authentication, wallet management, market orders, and limit orders**.
- Implemented a custom **FIFO order-matching engine** with sorted order books and partial fulfillment handling.
- Designed secure **REST APIs** and **containerized services** using Docker for scalable deployment and testing.
- Conducted performance testing with **JMeter** to validate system reliability under load.

Social Spark — AI Brand & Influencer Platform

React, Node.js, MongoDB, Gemini API, Docker

- Developed a **full-stack platform** to match brands with influencers using data-driven campaign insights.
- Integrated **Gemini API** to automate content analysis and generate campaign recommendations.
- Designed **secure authentication** and **backend services** to support scalable user interactions and data processing.
- Designed **scalable backend services** with clear API boundaries to support future feature expansion.

RhythmBeats

Arduino, Teachable Machine, Sensors

- Developed a physical music composition system using **Arduino** and **sensor-based** inputs to detect and classify musical blocks.
- Integrated a **Teachable Machine model** to map physical inputs to musical notes and instrument sounds.
- Designed the system to provide reliable **real-time feedback** and an engaging tangible interaction experience.

SceneCraft

Arduino, AI, Physical Interaction

- Built an **interactive storytelling tool** that combines physical object manipulation to generate AI-based narrative prompts.
- Designed **intuitive tangible interactions** to support creativity and engagement for young users.
- Integrated **Gemini API** logic to dynamically generate story elements based on user input sequences.

Technical Skills

Full-Stack: Python, Java, JavaScript, TypeScript, React, Node.js, Express, HTML, CSS, Tailwind CSS, REST APIs, JWT Auth

Databases: MongoDB, PostgreSQL

Tools: Docker, Git, Linux, CI/CD Basics

Concepts: API Design, Microservices, Performance Optimization

Additional

Interests: Building scalable systems, learning new technologies, system design, video games
